INTRODUCTION:

The objective of this conference is to gather together the researchers, scientists and scholars who have been working and are interested to learn and share their wisdom acquired in the area of Intelligent Cyber Systems and Security.

Intelligence is supposed to be a gift bestowed upon few species, including us, by the Mother Nature. With the advent of cyber systems, men have always strived to put some intelligence into them, in order to make them think and do as good as we.

A few techniques have become a standard name when intelligence and cyber systems are talked together-Fuzzy Logic, Artificial Neural Network, Genetic Algorithms, Chaos Theory, to name a few. With the sprawling use of intelligent cyber systems in every walk of life, from restaurants to banking and from education to space research, security of such systems has emerged as a challenging issue.

Data Science cannot be ignored when intelligence and cyber systems are discussed together. In order to learn behavior or acquire knowledge, intelligent systems go through a training program on the available sets of behaviors or patterns. These patterns are often not so apparent and may only be derived after a detailed and complex computational analysis carried out on the data. Thus, data science substantializes its influence in intelligent computing.

RECOMMENDED TOPICS:

Topics to be discussed in this special session include (but are not limited to) the the following area:

- Fuzzy logic and its applications
- Machine intelligence and artificial neural networks
- Optimization algorithms like genetic algorithm, particle swarm optimization, etc.
- Bayesian forecasting, regression and other statistical methods
- Data Analytics and Big Data
- Big data security
- Cyber hacking and Cyber threat intelligent analysis
- Load balancing, resource optimization and dynamic resource sharing
- Internet of Things, cloud computing
